Canadian statistical review

January 1986

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by NorthwestTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwestTel Inc.)	Call collect 420-2011

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — \$75.00 Canada, \$90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Transportation Division
- B.J. Lynch — Director General, Operations Branch
- R. Platek — Director, Census and Household Survey Methods Division
- J.G. Stinson — Director, CANSIM Operations Division
- G.J. Brackstone — Assistant Chief Statistician, Informatics and Methodology Field

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Director, Population Studies Division
- P.N. Triandafillou — Director, Agriculture/Natural Resources Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

¹As of the first of each month, quarterly and annual data from 1951 to April 1, 1981 are intercensal estimates; the June 3, 1981 Census Count has been adjusted to correspond to June 1; final postcensal estimates from July 1, 1981 to June 1, 1982; updated postcensal estimates from July 1, 1982 to October 1, 1983 and preliminary postcensal estimates from January 1, to October 1, 1984. For an explanation of population estimates methodology and data sources, see Catalogues 91-210 (first issue) and 91-001, Vol. 10, No. 2.

Sources: Quarterly Estimates of Population for Canada, the Provinces and the Territories (91-001), Postcensal Annual Estimates of Population by Marital Status, Age, Sex and Components of Growth for Canada, Provinces and Territories at June 1st (91-201).

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 • System of National Accounts

1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and
Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

- 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. ¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity.

*For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.
 Note: All series are subject to revision each year when more recent Census of Manufactures data become available.
 Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars)

Non-durable goods industries

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

End of period and month	Inventories owned				Inventories held: Total			Inventories held: raw materials							
	Consumer goods	Capital goods	Con-struction materials and components	Supple-mentary classification: auto-motive products	Consumer goods	Inter-mediate goods and supplies	Export-oriented industries	Consumer goods		Capital goods	Con-struction materials and components	Inter-mediate goods and supplies	Export-oriented industries	Supple-mentary classification: auto-motive products

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

Table 12: Primary iron and steel (thousand metric tonnes)

Year and month	Primary production ^{1,2}				Net shipments of steel shapes to consuming industries ^{2,3,4} (Rolled steel products only)

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

Note: Monthly data includes all producers of electric energy who generate 20 MW.h or more per year. The monthly data accounts for approximately 99% of all generation plus 100% of all imports and exports.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.²Gross new production by field less field flared and waste.

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

³Includes crude oil, condensate and pentanes

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank: series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — \$75.00 Canada, \$90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Transportation Division
- B.J. Lynch — Director General, Operations Branch
- R. Platek — Director, Census and Household Survey Methods Division
- J.G. Stinson — Director, CANSIM Operations Division
- G.J. Brackstone — Assistant Chief Statistician, Informatics and Methodology Field

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Director, Population Studies Division
- P.N. Triandafillou — Director, Agriculture/Natural Resources Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

STASIS AMID CHANGE — INCOME INEQUALITY IN CANADA 1965–1983

by Michael C. Wolfson*

A PAPER PRESENTED TO THE
INTERNATIONAL ASSOCIATION FOR RESEARCH
IN INCOME AND WEALTH

Nineteenth General Conference
August 25–31, 1985
Noordwijkerhout, Netherlands

"Economics consists of theoretical laws which nobody has verified and of empirical laws which nobody can explain."

attributed to Michael Kalecki by
Josef Steindl (1965)

Introduction

The conventional wisdom in Canada is that income inequality has not changed at all since the Second World War. When data are used to support this contention, it is frequently observed that the share of income going to the bottom 20% of the population (the bottom quintile) is about 4% while the amount received by the top quintile is about 40%, and neither figure has changed significantly over time.

This apparent stability in the distribution of income is surprising in view of the major economic and social changes that have occurred. For example the scope of government transfer payments has increased very substantially as has female labour force participation. The macro economy has gone

through major changes from relatively sustained growth to "stagflation" and now to very high levels of both unemployment and real interest rates.

In this context, the apparent stability of the Canadian size distribution of income may be explained by two alternative (but not necessarily mutually exclusive) hypotheses:

1. The conventional indicators of income inequality such as quintile shares and the Gini coefficient are not sufficiently sensitive to changes in the shape of the income distribution, and thus have obscured significant changes over time; and/or
2. The many important socio-economic changes in recent decades have somehow turned out to be almost entirely offsetting in terms of their impact on overall income inequality.

The principal objective of this paper is to determine whether either of these hypotheses has any support

A further objective is to determine whether various particular changes in recent years such as "unbundling" of households and high nominal interest rates have tended to have an equalizing or disequalizing impact on the distribution of income. For example, one generally held view is that economic factors such as high unemployment rates have been particularly hard on the poor, so that the recent increase in unemployment rates is disequalizing (Blank and Blinder (1985)). Similarly, another generally held view is that poverty rates would be much higher if so many women were not working to help support their families, and further that increased female labour force participation has been equalizing (Horne and MacLeod (1980)).

* Director, Distributional Analysis Division, Statistics Canada, Ottawa. This paper would not have been possible without the support and cooperation of my colleagues within Statistics Canada. I am particularly grateful for the research assistance of Brian Murphy, and the helpful comments of a number of colleagues. The views expressed in this paper, as well as any errors or omissions, are my own and do not necessarily reflect the views of Statistics Canada or the Government.

Data

The analysis to address these questions is based almost entirely on, and thus circumscribed by, a series of annual income distribution surveys. These are the Surveys of Consumer Finance (SCF) now carried out annually by the Household Surveys Division of Statistics Canada. Six surveys spanning the period from 1965 to 1983 (with intervening years 1971, 1975, 1979, and 1982) have been drawn upon. 1965 is the earliest year the SCF covered the entire population, not just urban areas, while data on 1983 incomes are the most recent available.

The survey is based on a complex sample design with households as the basic unit. However within each household, income data for all individuals age 15 or over are collected, as are family relationships. For purposes of this analysis, a consistent set of computer micro-data tapes were assembled where the basic income recipient unit was the census family — unattached individuals and parent(s) living with never-married children.

The income information in the surveys is, of course, subject to the well known problems of non-response and under-reporting (for example see Statistics Canada (1985)), and the reader is cautioned to bear this in mind when interpreting the results. As well, the data are subject to a range of conceptual limitations. In 1965, no information was collected on income taxes paid. More generally, no data are available on net imputed rent or accrued investment income even though these are clearly important (eg. see Weisbrod and Hanson (1969), and Wolfson (1979)). Finally, it is sometimes argued that lifetime income or consumption are more appropriate indicators of economic well-being than annual after-tax income. While there is some conceptual merit in this view, such indicators are beyond the available data and the scope of this paper.

Basic Observations

The starting point in this analysis is shown in Charts 1 and 2 which plot the five quintile shares of the distribution of total money income over the period 1965 to 1983. Chart 1 shows the six observations using the narrower census family concept that form the basis of this analysis, while Chart 2 shows all survey years in the period for the broader economic family concept — all related persons living together. In both charts, the share of the bottom quintile

varies over a range of one percentage point while that for the top quintile varies over a range of two percentage points, neither showing any particular trend. There is no absolute standard to judge whether the plot shows "surprising" stability of the income shares over time, or significant trends or fluctuations. Thus, to provide a comparative basis, Charts 3 to 5 and Tables 1 and 2 present related time series over the same period.

The changing age structure of Canadian census family units is shown in Chart 3. The population has been divided into four groups based on the age of the eldest of the family head and spouse if present, "young" (under 25), "early-middle" (25-44), "late middle" (45-64), and "elderly" (65 or over). The main feature is the post-WW II baby boom cohort establishing themselves as independent "young" family units in the 1965 to 1975 period, and then moving into "early middle" age in the next decade.

More significant demographic changes are indicated in Chart 4. Here, family units have been divided into groups of unattached individuals, couples without children, couples with children, and single parents. The baby boomers left home in the period 1965 to 1975 (the family "unbundled") causing an increase in the proportion of unattached individuals'. This, coupled with a sharp drop in fertility rates (from a high of 3.9 in 1959 to 3.1 in 1965 down to 1.7 in 1983), accounted for a one-quarter drop in the proportion of family units that were traditional husband-wife families with children. Finally, the increased rate for divorces and separations is reflected in the one-third increase in the proportion of single-parent families.

Turning to macro-economic trends, Charts 5.1 and 5.2 present five basic indicators. Roughly speaking, the 1965 to 1983 period in Canada can be divided into three phases. First, from 1965 to the early 1970s is the close of the post-war golden growth years. Real economic growth was strong, unemployment and inflation rates were low, and real interest rates were "reasonable". The next phase, from the mid to the late 1970s was one dominated by accelerating inflation and low, even negative, real interest rates. Economic growth slowed but generally remained positive, while real average wages fell. The most recent period has been one of decelerating inflation, recession, and unusually high real interest rates.

Macroeconomic Trends

Chart — 5.2

Macroeconomic Trends

These changes in the macro-economy have been reflected in the sources of income of Canadian family units as shown in Table 1. The strong economic growth through the end of the 1960's was the backdrop for major expansions in Canada's welfare state programs — old age pensions, unemployment insurance, social assistance (i.e. welfare), and automatic indexing of many benefit levels as well as the personal income tax system, though these improvements were largely in place by the early 1970s. Increases in the unemployment rate in the 1978 to 1982 period are linked to decreases in the share of employment income and increases in government transfer payments, particularly unemployment insurance and welfare. High nominal interest rates are associated with larger shares of investment income. At the same time, personal income taxes as a proportion of total money income showed very little change. (The macro-economic trends shown in chart 5.1 and 5.2 and their relationship to trends in income inequality are discussed at greater length in the penultimate section herein.)

One of the most dramatic changes over the last two decades has been the increase in female labour force participation. This is reflected in Table 2 where the four family types shown in Chart 4 have been further disaggregated by an indicator of the effective labour force participation (ELFP) of various family members. An individual or family member was considered an ELF participant if the absolute value of their employment income exceeded 2.5% of the average industrial composite wage in the year (i.e. about one week of full-time average-paid work). Note that the ELFP concept is *not* the same as the more usual definition of labour force participation. For example, an individual could have been unemployed all year and hence in the labour force but would not be counted as an ELF participant.

Based on this ELFP criterion, family units were divided into as many as six groups, depending on the type of family:

- No Earners — no family members were ELF participants;
- Primary — the head or spouse if present but no other family member was an ELF participant;
- Primary Plus — either the head or spouse but not both and at least one child was an ELFP;
- Modern — both the family head and spouse but no one else were ELFPs;
- Modern Plus — both the family head and spouse and at least one child were ELFPs; and

Children Only — only one or more children were ELFPs.

Particularly amongst married couples with children, the proportion of "primary" families dropped by more than half while the proportion of "modern" families increased by more than 50%.² Similar trends are evident for couples without children.

In view of the sometimes dramatic trends and fluctuations over the past two decades in the demographic structure and ELFP of Canadian families, and in the macro-economy, the apparent stability of the quintile shares in Charts 1 and 2 may well be considered surprising.

Measurement Concerns

There are several reasons why the relative stability of the quintile shares shown in Charts 1 and 2 and the implied level of income inequality may be more apparent than real. The first is the obvious point that quintile shares are *not* sensitive to changes in the size distribution of income within each quintile. For example, it can be shown that the share of the top 5% (the top "vingtile") could be anywhere between 11 and 26% and still be consistent with the quintile shares in Chart 1.

Inequality is a difficult concept to formalize. One approach developed, among others, by Atkinson (1970), Sen (1973), Love and Wolfson (1976), Shorrocks (1980) and applied more recently by Cowell (1984) is an axiomatic one. This approach starts by specifying a set of basic conditions or axioms that an acceptable inequality measure must obey. For example, the measure should respond smoothly to small changes in the distribution; it should be anonymous; and it should be scale independent — it should make no difference to measured inequality whether income is measured in one or five dollar units, nor if population is measured in numbers of family units or fractions of total population. Quintile shares and the Gini coefficient satisfy all these conditions.

The one key further widely accepted condition is the Pigou-Dalton Condition of Transfers. This condition requires that if one higher income unit gives a small amount of their income to a lower income unit, measured inequality must decline. This condition is formally equivalent to the post-transfer Lorenz curve being at least somewhere closer to the 45° line and everywhere else coincident with the pre-transfer Lorenz curve. While this condition is not particularly controversial,³ quintile shares as just noted do not satisfy it, though they never show opposite results. The variance of logarithms, however, violates the Condition of Transfers.

For precision, we use the term inequality measure for statistics like the Gini coefficient that strictly satisfy the Condition of Transfers, and the term inequality indicator for statistics like quintile shares which never violate the condition but may show no difference between two distributions even if one Lorenz curve is clearly closer to the 45° line.

Beyond this, the concept of strength of transfer developed in Love and Wolfson has been employed to choose three different inequality measures which are relatively most sensitive to changes in inequality in the lower, middle, and upper ranges of the income spectrum — the exponential measure (EXP), the Gini coefficient, and the coefficient of variation (CV) respectively.⁴ If in comparing two distributions all three of these measures move in the same direction, then it is likely that the associated Lorenz curves do not cross; if the three measures do not agree in their ranking then it is certain the Lorenz curves do cross.

Another issue related to the measurement of inequality is, in the terminology of Love and Wolfson, the ordering principle. Usually, income distribution statistics are based on the distribution of family units (i.e. unattached individuals and families) by total family income. However, one could just as easily use distributions of per capita incomes over family units or over individuals. The analyses in Wolfson (1979) and Cowell (1984), for example, indicate that the choice has a significant impact on measured inequality.

For this reason, two ordering principles have been used in this analysis. The first is the conventional total family income by family unit. The second is total family income per equivalent adult unit (EAU) by family unit. This second ordering principle takes rough account of the economies of scale widely presumed to obtain in family living, and reflected in Social Assistance benefit levels and the differentiation of poverty lines by family type. To determine the number of EAUs in a family, the first person is counted as one, the second as 0.67, and 0.33 for the third and subsequent family members (all of whom are children since the census family concept is being used). Thus a couple with two children is treated as 2.33 EAUs and if their income is \$46,600, they would be treated as one family unit with an income of \$20,000 under the second EAU-based ordering principle.⁵

A third concern is the choice of total money income as the income concept. It is becoming increasingly

difficult to distinguish government transfers to individuals and tax expenditures in the personal income tax system, particularly with the advent of refundable income tax credits. Thus, it would be better to examine trends in the distribution of after-tax income. Ideally, at least payroll taxes among other taxes would also be taken into account but the data are not available. Alternatively, trends in the inequality of pre-government or "market" income (as defined in Table 1) are also of interest. Due to the lack of income tax data for 1965 on the one hand and the importance of the shifting role of government transfers on the other, the total money income concept is the one that will generally be used.

A fourth and frequently neglected concern is sampling variability. For example, based on the analysis in Love and Wolfson (1976, Appendix 2), twice the standard error in the Gini coefficient would range from 0.008 overall to 0.026 for about a 10% subgroup of the sample. This in turn suggests that a 95% confidence interval would be on the order of a $\pm 2\%$ for the whole sample, and more than $\pm 5\%$ for smaller sub-groups. The CV is much more variable because of its relative sensitivity to the tails of the distribution, the fact that the upper tail in particular is significant (i.e. income distributions are characteristically positively skewed), and the fact that the estimates of this upper tail are not very reliable because the samples were not stratified by any significant correlate of income. These same considerations affect the top quantile shares.

Stasis in Income Inequality?

Table 3 shows the sensitivity of the results in Chart 1 to these various measurement concerns. The first three parts of the table give a range of inequality statistics for three different income concepts — market income, total money income, and after-tax disposable income respectively. These are all for the conventional ordering principle of total family income by family unit. The fourth part of the table is based on the total money income concept as in part a, but uses the other EAU-based ordering principle — family income per equivalent adult unit by family unit. In all four parts of the table, three inequality measures and the top decile and vingtile shares are shown in addition to the basic five quintile shares.

The statistics in the first four parts of Table 3 have been rounded to a rough estimate of the maximum number of digits likely to be statistically significant at the 95% level. (We mention this because the academic literature still often shows tables with

TABLE 3 INCOME INEQUALITY TRENDS, SHARES AND MEASURES FOR THREE INCOME CONCEPTS, TWO ORDERING PRINCIPLES AND TRUNCATION OF TOP 5 INCOMES

- Market income
- Total money income
- - - Money income per EAU
- Disposable income

more digits than can possibly be supported by the underlying data). As a further check, part e of Table 3 shows the effect on measured inequality of simply dropping the top 5 family units and then recomputing all the inequality measures and indicators. Particularly for the CV, it appears that the rounding in the top four parts of the table is an insufficient indication of reliability. Deleting even a single observation in 1983 or 1971 (not shown in the table) causes the CV to drop by over 15%; one significant digit at most thus seems justifiable. For the other inequality statistics, probably two digits can be considered significant.

To highlight the key trends and patterns in Table 3, Chart 6 contrasts the three income concepts and two ordering principles for each of the three inequality measures. The absolute extent of measured or indicated inequality does indeed vary in the expected way. The EAU-based ordering principle shows systematically more equality than the conventional family income per family unit approach to constructing income distributions. As well, market or pre-transfer income is the most unequally distributed, while disposable or post-tax and post-transfer income is most equally distributed (all using the conventional ordering principle). The equalizing impact of government transfers appears greater than that of personal income taxes, particularly in the lower and middle income ranges. This is evident in Chart 6 from the somewhat wider gap between the Market and Total Money Income curves than between the Total Money and Disposable Income curves for the EXP and Gini measure — the inequality measures respectively most sensitive to inequality in the lower and middle income ranges — though the CV also shows this pattern.

More importantly from the perspective of this analysis, all four combinations of income concept and ordering principle and all inequality measures and indicators show a similar time profile. Inequality rises from 1965 to the early 1970s, drops to a low in 1979 or 1982, and then increases to 1983, though the “peaks” and “valleys” are not completely uniform in their timing. Also, market income shows some trend toward increasing inequality which must have been offset by government transfers since the trend in total money income inequality is closer to being flat. However, the peaks generally correspond to the years shown in the bottom part of Table 3 where high income “outliers” had the greatest impact. Also, it should be noted that the origins of the vertical axes in Chart 6 are not at zero, so that the apparent fluctuations in inequality are accentuated.

The overall conclusion must be equivocal. Certainly the EXP and Gini inequality measures in Table 3 and Chart 6 appear to show some small but significant variations over time. The CV shows greater variation, but this may still be more apparent than real due to sampling variability in the upper tail of the income distribution to which it is particularly sensitive. The quintile shares in Charts 1 and 2 look remarkably stable. On balance, it may be concluded that the current conventional wisdom is largely correct — the shape of the distribution of total money income has not changed appreciably in the last two decades.

Disentangling — the Standardization Approach

In order to assess the second hypothesis, that various trends that would otherwise have had a significant impact on income inequality have in fact tended to cancel each other out, techniques of standardization will be applied. These techniques were developed and illustrated in Love and Wolfson (1976), and have been applied, for example, in Horner and MacLeod (1980).

The basic idea of standardization is to pose a series of hypothetical and admittedly mechanical questions. For example, what would the 1983 distribution of income have been like if the age structure of the population were reweighted to reflect that in 1965? If, with such a reweighting or standardization, the hypothetical and artificially reconstructed distribution has a noticeably lower degree of inequality, we can then suppose first that shifts in age structure have been of significant magnitude, and second that they tended to increase inequality directly. Of course, this technique cannot be used to draw any conclusions about the indirect effects, for example, of the baby boom age cohorts entering the labour force and depressing the relative wages of young workers.

The analysis reported here will be based primarily on five standardizations:

- age structure (as in Chart 3 above),
- family type (as in Chart 4 above),
- family type and age structure,
- family type and effective labour force participation, ELFP (as in Table 2 above), and
- total money income composition (as in Table 1).

ELFP is not considered by itself because the six categories are so closely bound up with the family type categories.

As already illustrated in the charts and tables above, these variables have shown significant trends or variations over the 1965 to 1983 period. Thus, we might expect the standardization process to result in considerably different degrees of measured income inequality.

In order to be precise about the standardization methodology being employed, the following formal notation will be used:

Let $f(y; t, m)$ = the normalized distribution of income in year t for population sub-group m , where a normalised distribution has been vertically and horizontally scaled so that mean income and total population both equal one. (Recall that such scaling does not affect measured inequality.)

$p(t, m)$ = the number of family units in year t for population sub-group m

$u(t, m)$ = the average family unit income in year t for population sub-group m

so that $f(z; t, m) = (p(t, m)/u(t, m)) f(y/u(t, m); t, m)$ = the actual population density for the distribution of income in year t for sub-group m

And $f(z; t) = \sum_m f(z; t, m)$ = the overall distribution of income in year t (i.e., the vertical sum of the constituent non-normalized distributions)

Where m is an index ($1 \leq m \leq M$) to some disaggregation of the population — by age, family type, ELFP, or some combination thereof.

What we now have with this notation is a way to break apart the actual observed distribution of income in a given year t , $f(z; t)$, into a set of $3 \times M$ objects — $2 \times M$ scalars (the M population counts and the M mean incomes) and M "shapes" of the constituent density functions, $f(y; t, m)$.

The concept of time series standardization then involves constructing an hypothetical $f(z)$ based on a mixture of $p(t, m)$, $u(t, m)$ and $f(y; t, m)$ from various years. More precisely,

Let $f(z; i, j, k, M) = \sum_m (p(i, m)/u(j, m)) f(y/u(j, m); k, m)$ = an hypothetical income distribution with year i populations, year j average incomes, and year k "shapes" of density functions within each sub-group where the population has been broken down into M sub-groups.

Thus, in the case where M represents the 4-way age breakdown in Chart 3, comparing $f(z; 1983, 1983, 1983, M)$ to $f(z; 1965, 1983, 1983, M)$ would be a precise way of answering the question posed at the beginning of this section.

The standardization just illustrated deals with dividing the overall population into M exhaustive and mutually exclusive sub-groups. Another facet of the distribution of income is its composition by income source. As illustrated in Table 1, this composition has changed significantly in the past two decades.

It is also possible to define a form of standardization to explore the impact of these shifts in income composition. The basic idea is to reportion each family's income in a given year so that the composition of aggregate income matches that in some other year. For example, suppose the composition of aggregate income shifted from (88%, 4%, 6%, 2%) employment, investment, transfer, and other money income respectively in year 1 to (79%, 7%, 11%, 3%) in year 2 (recall Table 1). Then, each family unit's respective income components in year 1 could be scaled by (.90, 1.75, 1.83, 1.5) to result in a distribution of income based fully on year 1 data except that the income composition matches that in year 2. While this is clearly a mechanical exercise, it can give an impression of the kind of impact changes in income composition have on income inequality.⁶

Standardization Results⁷

We begin with an example of standardization among an M -way partition of the population, letting M represent the 15-way breakdown by family type and ELFP shown in Table 2. Table 4 presents the results of a time series standardization for this 15-way breakdown of the population using the most recent 1983 data as the base year (i.e. all data are for 1983 except where explicitly noted otherwise), and the conventional ordering principle.

TABLE 4 STANDARDIZED INEQUALITY TRENDS, FAMILY TYPE AND ELFP, 1983 BASE YEAR

Standardization	Year	Income Share Within Quintiles					Top Decile Income Share	Top Vingtyle Income Share	Inequality Measures		
		First	Second	Third	Fourth	Fifth			Exp	Gini	Cv

The top third of the table shows the impact of the shifting population distribution among the 15 population sub-groups over the period 1965 to 1983. Virtually all the inequality indicators and measures show a modest but clear monotone trend of increasing inequality as later years' population compositions are used. This trend is most pronounced in the 1965 to 1975 period. Given that the main factors affecting the composition of this population disaggregation have been the "unbundling" of the baby boomers, increasing female labour force participation, and higher rates of separation and divorce, the results at the top of Table 4 would seem to imply that these factors have tended to increase income inequality.

It should be emphasized that even if unbundling has tended to increase measured inequality, this need not imply that overall well-being or social welfare has declined. Young people with low incomes living on their own may still be better off than if they had to live with their parents because their incomes were even lower.

Compared to the top part of Table 4, the trends in the middle part show an increase over the 1965 to 1975 period, then a somewhat more pronounced decline in inequality to 1982, and a smaller upturn in 1983. This suggests that shifts in average incomes among the 15 population sub-groups, particularly in the 1975 to 1982 period, have tended to be equalizing. Inspection of the underlying data indicates that the "no earners" groups (mainly, unattached individuals and couples without children, recall Table 2) which have below average incomes had increasing relative mean incomes in the later period, while above average income family groups with earners either had flat earnings after 1975 or experienced relative declines.

Finally, the bottom third of Table 4 shows a series of standardizations where only the shapes of the 15 within-group density functions are allowed to vary. These data show the same general trend as overall inequality — rising from 1965 to 1971, falling to 1975 or 1979, then generally rising through to 1983. The implication thus seems to be that overall trends in the shape of the income distribution permeate and are mirrored in the shapes of the distributions of constituent sub-groups, at least in the 15-way family type by ELFP breakdown being used here.

The data in Table 4 use a single year, 1983, as the base. However any of the six years could be taken as the base. The sensitivity of the standardization results to the choice of base year was examined

and it was found that all six trend lines moved quite closely in parallel. Thus the choice of base year is not particularly significant, so that 1983 has been taken as the base year in subsequent charts.

We turn now to the core of the standardization analysis with the results shown in Charts 7.1 to 7.3. (Note that the origins of the vertical axes are again not at zero, so apparent trends or fluctuations are accentuated.) The charts show the relative impacts of the four alternative population disaggregations — age (A), family type (FT), family type by age (FT-A), and family type by ELFP (FT-ELFP) — and the income composition (IC) standardization. The three charts show respectively standardizations for population shifts, relative mean income shifts, and shape or within-group inequality trends for the population breakdown types of standardization. The IC standardization results are repeated in all three sets of graphs. Each chart displays four graphs in order to capture variations in the trends revealed by the three inequality measures, and for the Gini coefficient the sensitivity to the ordering principle. In turn, each of the four graphs shows five curves corresponding to the four standardizations for different population disaggregations and the one for income composition.

We start with the population share standardizations for the conventional ordering principle in Chart 7.1 (parts a, b, and c). It should not be surprising, given the somewhat more stable trends in the age structure in Chart 3 as compared to family type composition in Chart 4, that the family type (FT) standardization shows a more pronounced trend than the age structure (A) standardization, though mainly in the 1965 to 1975 period. The combined 16-way FT-A standardized inequality trend is very similar to that by family type alone but somewhat less pronounced. The comparison among these three curves thus implies first that age structure changes have had less impact than shifts in family types, and second that if anything the age structure changes have tended to offset slightly the effects on income inequality trends of shifts in family types.

Comparing the 15-way FT-ELFP grouping to the other three population groupings, particularly for the Gini and CV (parts b and c), it is apparent that ELFP trends, again mainly in the 1965 to 1975 period, have had an impact. The FT-ELFP curve shows a larger upward trend than the family type (FT) only curve, implying that ELFP changes reinforce the impacts of family type changes. Furthermore, comparing the FT-A and FT-ELFP curves, ELFP changes appear more significant than age structure. However, the differences among the FT, FT-A, and FT-

ELFP curves are less noticeable for the EXP measure (part a). This suggests that the incremental importance of either age or ELFP in the population share standardization is small once shifts in the population amongst family types has been taken into account for trends in income inequality at the lower end of the income spectrum. Since the FT-ELFP curves correspond to the top part of Table 4 which has already been discussed, the interpretation is the same — shifts in the composition of the population toward more single parent families and unattached individuals, and increasing ELFP among spouses — more “modern” families — are associated with increased income inequality.

Chart 7.1 also displays a standardization by overall income composition (IC). All three inequality measures indicate a general downward trend; later years’ patterns of income composition result in lower income inequality. This trend is opposite to that shown in the population standardizations, in particular by family type and ELFP, and considerably stronger.

As shown in Table 1, the main changes in overall income composition have been a 50% increase in the relative importance of government transfers, almost a doubling of investment income, and a corresponding decline in the role of employment income from 88.6% to 78.7% of total money income. The equalizing impact of this shifting income composition may be somewhat counter-intuitive: Employment income is generally thought to be more equally distributed than investment income, so that a shift from employment to investment income might be expected to be disequalizing.

However, employment income is concentrated among the top three quintiles, as shown in Table 5.1, though the decline in its overall importance was sharpest in the second quintile. As well, except for the top quintile, investment income is generally progressively distributed.⁸ As shown in Table 5.2, this is due mainly to the relatively large share accruing to the elderly. Finally, government transfers which have increased in relative importance are progressively distributed, though it is interesting to note that their shares increased relatively more in the second and third quintiles than in the first quintile. Given that

government transfers and much of investment income are more progressively distributed than employment income (except in the upper tail of the distribution), the income composition standardization results in Chart 7.1 should not be surprising — that shifts in income composition have tended to be equalizing.

As shown in part d of Chart 7.1, the conclusions just drawn regarding age, family type, and income composition seem generally robust with respect to the choice of the ordering principle. After adjusting for family size using EAU, the FT curve shows a more pronounced trend than the age curve, and the stronger and opposite trend in the IC curve is the same as with the conventional ordering principle. However, the FT, FT-A, and FT-ELFP curves are almost coincident. Thus, the incremental contributions of the age and ELFP breakdowns given the family type disaggregation appears almost negligible. The cause of this result is not clear.

Turning next to relative mean income standardizations, these are shown in Chart 7.2. Except for the IC standardization which is repeated from Chart 7.1, the standardized inequality trends appear more humped than monotone up or down, with the peak in 1975 for the conventional ordering principle. As in the case of the population share standardizations in Chart 7.1, the 15-way FT-ELFP breakdown gives the most pronounced trends in the standardized inequality measures, though in this case it is the most humped trend rather than the trend showing the largest increase. Unlike Chart 7.1, this time it is the FT, A, and FT-A curves that are almost coincident.

An explanation of the humped patterns for these relative mean income standardizations based on inspection of the underlying data appears to be the following: Increased relative mean incomes among families compared to unattached individuals and among middle versus young and elderly age groups which occurred mainly in the 1965 to 1975 period were disequalizing, while increasing relative mean incomes of the “no earners” groups which occurred mainly in the 1975 to 1983 period and were presumably attributable to increased transfer payments were equalizing.

Chart 7.3 shows a series of the third type of population group standardizations. These focus on the changing shapes of the constituent income distribution density functions, the within-group inequality trends, for the four population disaggregations as well as repeating the IC standardization. The conclusion to the third part of Table 4 appears to stand: overall trends in inequality are mirrored in the constituent distributions for both a range of base years and a variety of disaggregations. Again in line with previous observations, the CVs in Chart 7.3 indicate that shape changes in the upper tail of the income distribution and/or sampling variability dominate the standardizations.

Finally, the EAU-based standardizations in both Charts 7.2 and 7.3 suggest that the conclusions with respect to the relative mean income, shape, and income composition standardizations are robust with respect to the choice of the ordering principle.

Working Women and Inequality

The standardization results, particularly for the FT-ELFP breakdown in Chart 7.1, appear at least in part contrary to the general view cited at the outset that increasing numbers of women entering the labour force have had an equalizing impact. However, the impact of increasing female labour force participation is confounded with other factors in the FT-ELFP population share standardization.

In order to check the role of increasing female labour force participation in isolation of other family

type and ELFP trends, a set of hypothetical distributions was constructed for each of the six data years. In these distributions, the employment incomes of the lower income spouses in "modern" couples were arbitrarily halved. The results of this simulation experiment are shown in Table 6 where the percentage change in each inequality indicator or measure is given. The results clearly show that increased second earner (mostly women) employment incomes are disequalizing, more so in later years when there are more women ELF participants. This is in direct contrast to the Horner and MacLeod (1980) result that increased female labour force participation has been somewhat equalizing.

This result can be explained by two main factors. First even amongst 'modern' couples with or without children, the underlying data show that increased incomes of second earners are generally disequalizing, particularly in the lower and middle income ranges (contrary to Swidinsky (1983) who found a generally neutral impact on inequality). Second, 'modern' couples have above average incomes, so any increase in average incomes for this group is disequalizing overall. As a final point, the experiment reported in Table 6 simplistically assumes proportionate changes in second earner employment incomes, even though in fact women entering the labour force have almost certainly not done so in such a smooth pattern. However, the results are generally robust for all the inequality statistics and all six base years. Thus, some account has been taken in the experiment of the actual shifting pattern of second earners over the past two decades.

TABLE 6 IMPACT ON INCOME INEQUALITY OF HALVING EMPLOYMENT INCOMES OF LOWER INCOME SPOUSES IN MODERN FAMILIES

Year	Income Shares						Inequality Measures			
	Quintiles									
	1st	2nd	3rd	4th	5th	Top Decile	Top Vintile	EXP	Gini	CV
1965	3.5	2.6	1.4	-0.9	-1.0	-0.2	0.8	-0.5	-1.5	0.3
1971	1.3	1.2	0.3	-0.6	-0.2	0.2	0.7	-0.1	-0.4	1.1
1975	5.5	4.5	2.1	-1.1	-1.6	-0.8	0.4	-0.8	-2.3	-1.8
1979	5.8	4.7	2.3	-0.9	-1.9	-1.4	-0.5	-0.9	-2.8	-3.2
1982	6.4	4.8	2.2	-0.6	-2.2	-1.8	-0.8	-1.0	-3.1	-2.1
1983	6.7	5.2	2.6	-0.3	-2.5	-2.3	-1.7	-0.8	-3.3	-5.9

Economic Factors, "Trickle Down" and the "Cruellest Tax"

The standardization results are also of interest in connection with the issue of the distributional implications of macro-economic policy. For example, Blank and Blinder (1985) have recently reconsidered this question and their conclusions reinforce the earlier U.S. literature that increases in unemployment are considerably more regressive than increases in inflation; inflation they conclude is *not* "the cruellest tax". These analyses were based on time series regressions of decile shares of the overall distribution on macroeconomic variables, particularly the unemployment and inflation rates.

In the context of this analysis, the search for macroeconomic correlates of shifts in income distribution is more problematic. The reason to begin is that the Canadian income distribution is generally stable over time, as already discussed in connection with Charts 1 and 2. In contrast, Charts 5.1 and 5.2 show that the rate of change of the CPI more than quadrupled over the period, the unemployment rate has more than tripled, the annual rate of real per capita GNE growth has ranged from more than 5.5% in 1971 to less than -5.5% in 1982, and the proportion of one-earner couples with children dropped by over 60%. Thus, variations in the distribution of income are quite small relative to the variations in other key variables.

Furthermore, some of the variations in overall inequality are of the same order as or smaller than the variations in standardized distributions. Thus, instead of searching for the statistical correlates of what appear to be fairly small variations in income inequality over time, as in the Blank and Blinder style econometric analysis, we can use the standardization experiments to try to draw out the interrelationships. The picture that emerges is more involved than in the Blank and Blinder analysis because, as we have already seen, socio-demographic factors are important and the impacts of cyclical macroeconomic variables like the inflation rate have to be traced through to their effects on family units' incomes.

As one piece of this picture, Table 5.2 above shows the trends from 1965 to 1983 in income composition by age group. While the tripling of the unemployment rate is almost certainly associated with the decline in the relative share of employment income, Table 5.2 shows that the sharpest decline in this income source was amongst the elderly. In turn, the decline in labour force participation among the elderly is probably more strongly associated with im-

provements in public pensions than with weakness in labour market demand. Also, despite the increase in unemployment, Table 2 shows no significant trends in the sizes of the "no earner" ELFP groups over time, except single parents. In fact, with the shift from one-earner to two-earner couples, the overall proportion of working age adults with employment income has increased. This suggests that weak labour market demand as reflected by the very sharp increase in the unemployment rate has been less significant in determining ELFP than the drop in fertility and the related increase in female labour force participation rates.

The other expected correlate of increases in the unemployment rate is increased government transfers, primarily through unemployment insurance (UI), but also to some extent through social assistance (welfare) — both directly to those unemployed who have exhausted their UI benefits and to single parents insofar as the increased divorce and separation rates are a result of high unemployment (as well as a fundamental shift in societal values). While the greatest increase in government transfers accrued to the elderly, more disaggregated data underlying Table 5.2 indicate considerable growth within the second quintile of the young and early middle age groups. This may be linked to the much higher youth unemployment rates of recent years, and the relatively high labour force growth rate as the baby boom cohorts entered working age.

The channels by which inflation affects income distribution, the other main macro variable examined in the Blank and Blinder style analysis, are much more obscure. Certainly as shown in Charts 5.1 and 5.2 there is no clear link between inflation rates and per capita real GNE growth, interest rates, or real average wage rates, three variables which at least intuitively have more direct links to family incomes. (We do not consider the impact inflation has in inflicting capital losses on holders of dollar denominated assets, nor in causing serious mis-statements of income from capital — due to lack of sufficient data.) Thus, these three variables rather than inflation itself will be examined in turn.

Strong real economic growth is associated with low rates of unemployment, and the links with unemployment rates have just been discussed. It is also associated with the "trickle down" hypothesis — in the rising tide of economic good times, not only the large boats of the rich but also the small boats of the poor are raised. Perhaps the main manifestation of the trickle down view in the period being examined is not one that operated simply through private markets. Rather in the mid- to late-1960s, it was

through the political process. The relatively strong economy provided the political backdrop for the introduction and major enhancement of social transfer programs. In the autumn of the post-WW II growth boom (viewed retrospectively), Canada introduced major new public pension programs, major reforms of UI and social assistance, and automatic CPI indexing for many major transfers. While Table 1 shows growth in government transfers still continuing after the slowdown and stagnation in real economic growth starting in the mid-1970s, this was largely endogenous. Partly it was the automatic response of income-tested programs such as UI, social assistance, and part of the pension system to declines in market sources of income, and partly it was the juxtaposition of CPI indexed transfers to declines in real average wages starting in the late-1970s.

The main impact of high nominal interest rates, the second channel by which inflation can influence household incomes and hence inequality, is on investment income. The relationship between the interest rate in Chart 5.2 and the relative share of investment income in Table 1 is quite clear. However, as shown in Tables 5.1 and 5.2, a substantial portion of the increase in nominal interest income associated with recent high rates of interest has accrued to lower income groups particularly the elderly, subject of course to all the caveats already noted.

Finally, more recent declines in real average wage rates as shown in Chart 5.2, as with the higher unemployment rates, is associated with a decline in the share of employment income in total income. As already discussed, and perhaps counter-intuitively, this has been equalizing.

Provisional Conclusions

This analysis started by questioning the conventional wisdom that income inequality has remained virtually unchanged in Canada in the post-WW II period. A closer look at the data tended to support this apparent stability, particularly in contrast with social trends such as increasing divorce and separation rates and female labour force participation, and economic fluctuations as reflected in such measures as rates of inflation, unemployment, real growth, and interest.

To understand this paradox of general stability in income shares in the face of major social and eco-

nomic trends, the technique of standardization as developed by Love and Wolfson (1976) was applied to detailed income distribution micro-data for six years over the period 1965 to 1983. The standardization analysis was applied first to assess various breakdowns of the population, specifically by age, family type, and effective labour force participation (ELFP) group, then to the role of trends in the composition of income.

In the case of population groups, the most significant trends in income inequality were associated with changes in the numbers of family units broken down by family type and effective labour force participation (ELFP). Changes in age structure were not as important. The changes in the composition of the Canadian population by family type and ELFP (eg. single parents, two-earner couples) in turn mainly reflected lower fertility rates, increased female labour force participation, increased divorce and separation rates, and more baby boom children living apart from their parents. These trends by themselves would have increased income inequality. A further more detailed analysis suggested that increased female labour force participation has had a disequalizing impact, perhaps contrary to conventional wisdom.

The result from standardizations relating to income composition was opposite to the population share standardizations. The decline in the role of employment income and the increasing role of investment and government transfer income were equalizing. Thus, increasing unemployment rates, tight money in so far as it has caused high interest rates, and stagnant economic growth have not had a serious adverse impact on income inequality; quite the contrary. With the social "safety nets" put in place in the late 1960s and their automatic responses to the weakening economy, and the substantial concentration of private savings among the elderly who have below average incomes, higher nominal interest rates and economic stagnation have been apparently equalizing.

Given the overall stability in income inequality, it might be (simplistically) concluded that the equalizing tendencies of macroeconomic factors, high interest rates and stagnant growth, have just offset the disequalizing social factors of "baby boomers" leaving home, lower fertility, higher divorce and separation rates, and higher female labour force participation.

END NOTES

- 1 The phenomenon of 'unbundling' is not fully captured in these data, particularly for the elderly. The census family concept which has been used is much closer to the idea of the nuclear rather than the extended family, so that even if they live in the same dwelling with their married children, the elderly would be treated as separate census families.
- 2 The author's spouse has suggested that more fitting labels rather than 'primary' and 'modern' would be 'anachronistic' and 'pre-modern' respectively. This accords with Illich (1982) who argues that the 'traditional' husband earning/wife at home family represents an unequal division of family labour that is of recent origin, tied to the rise of industrial market economies. The pre-modern term reflects the fact that even in supposedly modern two-earner couples, most unpaid housework is still done by the wife.
- 3 However, as noted in Love and Wolfson (appendix 3, 1976), measures satisfying the condition of transfers and showing increased equality would be consistent with increasing alienation or polarization as a uni-modal income distribution became bi-modal via a sequence of equalizing Pigou-Dalton transfers.
- 4 The exponential measure is simply $1/n \sum \exp(-Y_i)$ for n incomes Y_i with mean 1. This measure has the advantage over other "bottom sensitive" measures like the Theil Entropy or Theil-Bernoulli measures that it is well defined for zero and negative incomes. Such incomes are fairly common and legitimate in actual microdata. The CV is the squared coefficient of variation, again for n incomes Y_i with mean 1: $1/n \sum (Y_i - 1)^2$. Note that the CV is the most "top sensitive" measure used by Cowell (1984).
- 5 This method of computing EAU's is clearly arbitrary, in the interest of clarity of exposition and because a more rigorous and non-controversial approach does not appear to exist. Cowell (1984) prefers the ordering principle where the example in the text would be treated as five income recipient units each with an income of \$20,000. While there is certainly substantial income sharing within families, this ordering principle, or even one that would treat this situation as 2.33 units, would seem to contribute too much spurious equality.
- 6 Cowell (1984) uses a family of decomposable inequality measures. With such measures, the hypothetical standardized densities $f(z; i, j, k, M)$ for various population disaggregations would not actually have to be constructed. Inequality within each of the constituent population sub-groups could be computed, and then inequality of the standardized distribution could be computed as a function of these within group inequalities, and between group inequalities based on population shares and average sub-group incomes from other years. Thus, the analysis could be simpler. However, quintile shares are not decomposable. Nor does the decomposition work for the income composition type standardizations. Furthermore, as conjectured in Wolfson (1974) and implied by the theorems in Cowell (1984), there are no 'simple' measures (i.e. additively separable) that are 'nicely' decomposable and well-defined for zero or negative incomes (except the CV). For these reasons, and given the declining cost of computer processing, we proceed by actually constructing the full set of hypothetical microdata constituting the standardized distribution.
- 7 It should be noted that the sampling concerns noted earlier are much less significant for the standardized inequality trends, except where it is the shapes of the density functions that are varying over time.
- 8 It should be recalled that investment income as conventionally defined is quite seriously under-reported. Furthermore, it is overstated to the extent that nominal interest receipts ex-

ceed real interest income. It is also understated, particularly among the wealthy, to the extent accrued but not realized interest income and capital gains are not measured, and indirectly received investment income in holding companies and trusts is not included. Finally, imputed rental income is not included.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. 1. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 • System of National Accounts

1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and
Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

- 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total.

⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity.

*For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included. Note: All series are subject to revision each year when more recent Census of Manufactures data become available. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars)

Non-durable goods industries

¹Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars)

End of period and month	Non-durable goods industries												
	Total inventories owned												
		Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

¹Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars)/concluded

End of period and month	Non-durable goods (concl.)		Durable goods industries									
	Refined petroleum and coal products	Chemical and chemical products	Total	Wood	Furniture and fixture	Primary metal	Fabricated metal products	Machinery	Transportation equipment	Electrical & electronic products	Non-metallic mineral products	Other mfg.

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

End of period and month	Inventories owned				Inventories held: Total			Inventories held raw materials						
	Consumer goods	Capital goods	Construction materials and components	Supplementary classification: automotive products	Consumer goods	Intermediate goods and supplies	Export-oriented industries	Consumer goods		Capital goods	Construction materials and components	Intermediate goods and supplies	Export-oriented industries	Supplementary classification: automotive products

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

¹Gas types are included. ²Includes producers' shipments for export. ³In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. ⁴End of period. ⁵Electric and other. ⁶Excludes apartment type machines. ⁷Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.²Gross new production by field less field flared and waste.

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

³Includes crude oil, condensate and pentanes

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: Housing Starts and Completions (64-002), Statistics Canada.

¹Includes export shipments. ²Building Contractors, public and utility construction and structural steel fabricators.

Sources: Construction Type Plywood (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Hardboard (36-001), Rigid Insulating Board (36-002), Particle Board (36-003), Primary Iron and Steel (41-001), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Asphalt Roofing (45-001).

Section 9 • Food and Agriculture

- 96 1. Farm Cash Receipts, by Source
- 98 2. Inspected Slaughter, Cold Storage Stocks and Eggs
- 98 3. Farm Input Price Index and Selected Components
- 99 4. Exports of Grains and Livestock Products
- 99 5. Milk
- 100 6. Sugar

Table 1: Farm cash receipts, by source (million dollars)

Year and month	Total cash receipts	Supple- mentary payments	Total cash receipts from farming opera- tions	Crops											Rye	Flaxseed	Rapeseed
				Total crops	Wheat	Wheat C.W.B. partici- pation payments	Oats	Oats, C.W.B. partici- pation payments	Barley	Barley, C.W.B. partici- pation payments	C.W.B. net cash advance payments

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — \$75.00 Canada, \$90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Transportation Division
- B.J. Lynch — Director General, Operations Branch
- R. Platek — Director, Census and Household Survey Methods Division
- J.G. Stinson — Director, CANSIM Operations Division
- G.J. Brackstone — Assistant Chief Statistician, Informatics and Methodology Field

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Director, Population Studies Division
- P.N. Triandafillou — Director, Agriculture/Natural Resources Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Gross National Product 1985

Gross National Product rose 1.9% in the fourth quarter of 1985 to a level of \$466.8 billion, seasonally adjusted at annual rates. After allowing for a 0.6% increase in prices, the volume of GNP rose 1.3% in the fourth quarter. For 1985 as a whole, nominal GNP increased 7.8%. Excluding a moderate overall price increase of 3.2%, real GNP rose 4.5%, compared to 5.0% in 1984 and 3.2% in 1983.

In 1985, the major sources of growth shifted from external demand to domestic demand. Growth in household demand was particularly robust and more broadly based than in 1984. Housing activity rebounded from a dip in 1984, and business investment in plant and equipment recovered some of the sharp decline recorded between 1981 and 1984. In total, real final domestic demand rose by 5%, the strongest annual increase since 1976. Weak export prices helped to dampen the increase in the implicit price index of GNE to about 3% for the second consecutive year.

Real personal expenditure on goods and services rose by 5% in 1985, the largest annual gain recorded since 1976. Though the increase was spearheaded by continued gains in outlays for durable goods, there was also higher demand for other goods and services. Purchases of durable goods rose about 11% for the third straight year, with spending on motor vehicles continuing to rise rapidly. Outlays for furniture and appliances firmed during the year as housing activity strengthened. The increase in consumption of goods and services other than durables was broadly based, with notable gains in clothing and food.

Residential construction expenditures rose by 18% in volume in 1985, after a decline of 4% in 1984.

The rebound of housing activity coincided with renewed declines in mortgage rates during the year and the federal government's incentives to withdraw RHOSP funds by year-end. The recovery of housing demand was accompanied by a 3% rise in the implicit price index, following three years of little change.

Business investment in plant and equipment rose by 5% in real terms. This followed virtually no change in 1984, and left the level of investment 16% below its peak in 1981. The gain in 1985 was about equally divided between non-residential construction and machinery and equipment. By industry the largest increases originated in manufacturing and financial and commercial services, and there was a significant upturn in exploration and development outlays for oil and gas. Capital expenditures in the agriculture, trade and utilities industries were weak.

The volume of total inventory accumulation rose from about \$500 million in 1984 to \$1.1 billion in 1985. Within the non-farm business sector, stock levels rose most significantly for retail motor vehicle dealers. The rapid increase of stocks in this industry offset slower rates of accumulation in most other durable and non-durable goods industries. Within the farm sector, grain stocks held on farms rose substantially, reflecting a higher crop and lower sales.

Following a 20% gain in 1984, real exports rose about 4% in volume, as growth in the United States economy slowed markedly in 1985. Two-thirds of the gain was in exports of motor vehicles and parts; exports of food, and crude and fabricated materials were little changed in total in the year. The growth in the volume of imports of 7% was largely accounted for by motor vehicle products, notably pas-

senger cars, while import demand for machinery and equipment remained sluggish.

Wages, salaries, and supplementary labour income expanded by 7% in 1985, up slightly from the 6% gain in 1984, as there was some acceleration in the growth of both employment and average earnings. Personal income grew by almost 8 1/2% in 1985, mainly reflecting the growth in labour income. Personal disposable income rose 8%, although there were large quarterly fluctuations during the year due to irregular movements in personal income taxes. With nominal personal expenditure up over 9% in the year, the personal savings rate edged down from about 13% to 12%.

Fourth Quarter 1985

Following a 1.7% gain in the third quarter, the volume of GNP expanded by a further 1.3% in the fourth quarter. Increased spending on consumer goods and services and residential construction continued to account for most of the gain in aggregate demand. Business investment in plant and equipment was essentially unchanged, while there was a slowdown in the rate of inventory accumulation. Following four quarters of little change, exports edged up in the fourth quarter, accompanied by stable import demand.

The 1 1/2% gain in the volume of personal expenditure was broadly based. Spending on durable goods led the gain, up 3%, with significant increases in sales of furniture and appliances and motor vehicles. Relatively large increases in food and gasoline prices in the quarter slowed the rise in consumption of these non-durable goods.

Total gross fixed capital formation rose over 1% in constant dollars, after gains of about 4% in each of the two preceding quarters. Residential construction was up in volume, 8%, a slight slowdown from the gains in the second and third quarters of the year. Business real investment in plant and equipment was essentially unchanged. Outlays for non-residential construction declined for the second straight quarter, after a surge of almost 8% in the

second quarter. This drop offset further gains in spending on machinery and equipment.

Business non-farm inventory accumulation slowed from \$1.9 billion in the third quarter to \$1.0 billion in the fourth quarter. The slowdown occurred in all industries, except in retail trade where there was a large increase in inventories of motor vehicles.

Within the external sector, exports rose by more than 2% while import growth slowed from 5% to under 1%. The gain in exports was largely confined to motor vehicle products and wheat, with little change in shipments of crude and fabricated materials. Imports of motor vehicles and parts rose marginally in the quarter, following substantial gains in the previous quarter.

Corporate profits before taxes rose by over 10% in the fourth quarter, following several quarters of little growth. The upturn in profits originated mainly in the manufacturing and financial industries.

Wages, salaries, and supplementary labour income grew by 1.4% in the fourth quarter. A growth of 1.6% in both personal income and personal disposable income, accompanied by a 2.5% rise in consumer spending resulted in a decline in the personal savings rate to 10.2%.

Available on CANSIM: matrices 525-527, 1000-1024.

A printout containing all tables is also available on the day of release from the Gross National Product Division (\$35/\$140).

Note to Users:

Revised estimates of the Income and Expenditure Accounts will be released towards the end of June and will cover the period from 1961 to the first quarter of 1986. The revisions primarily reflect statistical changes resulting from revised source data, improved estimation methodologies, and a shift in the base year from 1971 to 1981 for the constant dollar estimates.

1 Actual change in millions of dollars.

For 1985 as a whole, Gross National Product increased 7.8% to a level of \$453.7 billion. Excluding a moderate overall price increase of 3.2%, real GNP rose 4.5%, compared to 5% in 1984 and 3.3% in 1983.

Gross National Product rose 1.9% in the fourth quarter of 1985 to a level of \$466.8 billion, seasonally adjusted at annual rates. After allowing for a 0.6% increase in prices, the volume of GNP rose 1.3%.

Wages, salaries and supplementary labour income and military pay and allowances rose 7.0% in 1985. Corporation profits before taxes advanced 5.4% after a 21.2% increase in 1984. Interest and miscellaneous investment income rose 11.2% and 3.5% in 1984 and 1985 respectively.

Annual changes in GNP and components.

Note: All quarterly data adjusted for seasonal variation and at annual rates

The growth in 1984 of exports and imports of goods and services by approximately 21% in each case was followed by increases of 7.7% and 11.9% respectively in 1985, resulting in a deficit on trade in goods and services of \$3.7 billion compared to a surplus of \$1.6 billion in 1984.

In the fourth quarter of 1985 exports of goods and services rose 3.4% and imports increased 2.5%. The deficit on trade in goods and services was lowered by \$1.1 billion as an increase in the merchandise surplus was partly offset by a higher non-merchandise deficit.

In 1985 the major sources of growth shifted from external to domestic demand; real personal expenditure on goods and services rose by 5.2%, the largest annual gain recorded since 1976. Expenditures in business investment in plant and equipment and residential construction rose significantly.

Annual changes in GNE and components in constant (1971) dollars.

Note: All quarterly data adjusted for seasonal variation and at annual rates

Financial Activity in Canada

Preliminary data

Fourth Quarter 1985

During the fourth quarter of 1985, non-financial domestic sectors of the Canadian economy raised \$24.1 billion on conventional credit markets, (in nominal dollars, unadjusted for seasonality), remaining virtually unchanged from the equivalent quarter of 1984.

The most notable feature of the quarter was the continuing strength in demand for funds by the household sector, whose total borrowings on these markets accounted for 34% of the funds so raised. Growth in consumer credit remained strong, rising \$2.3 billion, almost matching the record increase in the second quarter of 1985. This development reflected activity on the "real" side of the economy, in that consumer expenditures, especially on durables, were a contributing factor to the economy's strength. Moreover, interest rates, especially on autos, were very favourable. In addition to consumer credit, households also increased their net demand for mortgage funds, borrowing \$4.7 billion, the second consecutive quarter when mortgage borrowing has exceeded \$4 billion. The strength in households' demand for mortgages mirrored the housing market's performance in recent months: from an annualized, seasonally adjusted rate of 123,000 in January, housing starts accelerated through the year to 204,000 in November, before dropping back in December. It is unclear to what extent the elimination of the tax benefits on Registered Home Ownership Savings Plans was a factor in the demand for housing. Demand for mortgage funds is also related to sales activity in the existing stock of houses, which also appeared strong in the fourth quarter. One year mortgage rates fell below 10 percent in the fourth quarter, while five year mortgages fell to 11.5 percent. These were the lowest that these rates have reached in over six years. Persons and unincorpo-

rated business also borrowed \$1.5 billion in bank loans, most of which was applied to the purchase of Canada Savings Bonds.

In contrast to the personal sector, non-financial private corporations raised only \$2.3 billion on conventional credit markets. Inventories showed little change while fixed capital formation was up sharply from the same period in 1984, particularly spending on residential construction and machinery and equipment. Internally generated funds, remaining at the average for the year, accounted for nearly 90% of non-financial investment costs, leaving a net borrowing requirement of \$1.3 billion.

Financing activity reflected the developments in the real economy in that there was no net increase in short-term debt (often related to inventory financing), whereas the equity market remained active. Short-term paper outstanding, which had risen a record \$5.7 billion in the previous quarter, fell \$2.1 billion. The advantageous yield differential between bankers' acceptances, for example, and the prime rate narrowed sharply. This change was reflected in the extent of borrowings from banks, which rose \$1.2 billion after having fallen \$1.6 billion in the previous quarter. Net bond issues remained at about the year's quarterly average. Of gross new issues, 35% had terms to maturity of over twenty years. In contrast to their somewhat subdued borrowing activity, non-financial private corporations raised substantial equity financing. With stock markets reaching record highs during the quarter, this sector raised \$2.0 billion in net share sales; the common preferred split was approximately 70:30. Mining companies accounted for about one fourth of the issues, communications a little less than one fifth, and real estate about one eighth.

General government's share of funds raised on conventional capital markets amounted to 55% in the fourth quarter, the same as the fourth quarter in 1984. Net sales of Canada Savings Bonds were \$9.8 billion, up moderately from the previous year. These sales allowed the Government of Canada to reduce the amount of Treasury bills outstanding by \$2.6 billion. The federal government also raised \$1.8 billion in foreign currency in order to bolster Canada's international reserves. These were undertaken through borrowings from Canada's chartered banks, a Eurobond issue and a loan from Japanese institutions. These funds were passed to the Exchange Fund Account, and to the extent that the latter acquired Canadian dollars on international currency exchanges, they became available to the government to meet its financing requirements.

Gross issues of Government of Canada marketable bonds on Canadian capital markets amounted to \$4.4 billion. One fifth had terms to maturity of over twenty years, up moderately from the previous quarter. Provincial governments' borrowings through conventional credit markets (i.e., excluding issues to the Canada Pension Plan) were \$1.3 billion. Of gross new issues, somewhat under a third were placed in Canada. U.S. dollar issues accounted for 37% while 25% were denominated in Swiss francs.

During the quarter, the yield curve flattened, producing a very mild saucer shape by year end. Short-term rates had continued into October their fall evident since February. However, with the Canadian dollar showing weakness in November, rates at the short end of the market began to rise. On the other hand, yields on longer term instruments continued to fall, so much so that the differential between short and long term Government of Canada instruments had fallen from about 220 basis points at the end of September to about 80 by year's end. At the same time, the uncovered yield differential between short-term instruments in Canada and the United States widened in the order of 70 basis points. Despite these developments, and the borrowings on foreign markets mentioned above, Canada's reserves fell slightly.

Not all rates at the shorter end of the market moved up in the quarter. Both prime and mortgage rates fell, bringing the prime rate to 10% for the first time since the summer of 1978. With the narrowing of the differential with short term paper and the activity in consumer credit and mortgage financing, the chartered banks saw their loan portfolios rise sharply. Their loans rose \$3 billion, consumer credit \$1.1 billion, and mortgages \$1.9 billion. This lending

was partially financed through the sale of \$1.2 billion in Treasury bills.

For the year 1985

Financing on conventional capital markets by non-financial domestic sectors was stronger in 1985 than it had been the year earlier. \$86.5 billion were so raised by those sectors, 19% of Gross National Expenditure. In 1984, these funds amounted to \$69.1 billion, 16% of GNE. The rate of growth of debt instruments (i.e., excluding equities) was 10%; nominal GNE rose 7.8%. The monetary aggregates grew as follows; M1, 4.2%; M2, 9.5%; M3, 5.9%.

Two of the major factors contributing to the relatively strong growth in the real economy in 1985 were consumer spending and housing. The personal savings rate (as measured by National Income and Expenditure Accounts) declined somewhat. These developments, coupled with the strengthening of the personal sector's balance sheet over the past few years, combined to prompt a marked pick-up in borrowing activity by the persons and unincorporated business. In 1984, they raised \$15.8 billion; in 1985, \$22.8 billion, raising their proportion of funds raised by domestic non-financial sectors to 25%. Consumer credit debt demonstrated the highest rate of growth, up 14.4%. Mortgage debt rose 10%, which even in nominal dollars of \$13.9 billion, was not as strong as the \$14.8 billion recorded in 1978.

Total household conventional debt outstanding at year end amounted to 75% of personal disposable income, little changed from the end of 1984.

Non-financial private corporations accounted for one quarter of these borrowings in 1985, up from one fifth the year earlier. The continuing recovery in capital formation — particularly for machinery and equipment and housing — brought spending, in nominal dollars, by this sector to the peak reached in 1981. In volume terms, however, capital spending remains substantially lower. Inventories grew moderately, but their levels were still considerably lower than the record levels of 1981, as a result of the large de-stocking that occurred in 1982. With internally generated funds growing only modestly — and all the increase was attributable to capital consumption allowances — this sector's external financing needs rose from virtually zero in 1984 to \$5.5 billion in 1985 (on a National Income and Expenditure Accounts basis).

At the same time, corporate managers have continued to address their debt: equity ratios. Although

short-term debt instruments began to grow more strongly than they have since 1981, equity financing remained very strong, accounting for 45% of the total. Weakness in bond financing may indicate corporations are satisfied, for the moment, with their short-to-long term debt ratios or it may merely mean that they are waiting a further drop in long term yields to reflect lower inflation expectations.

The debt instrument showing the greatest increase was short-term paper: the amount outstanding rose by 24%. Bank loans rose a modest 3%. Net bond borrowings remained at the subdued levels evidenced in 1984. The capital raised through net share issues rose to \$10.0 billion, up from \$8.8 billion in 1984, continuing the trend of the past few years of increasingly having recourse to equity markets. The net effect of these developments was to improve further the debt: equity ratio. Having reached a peak in 1982, at 1.62:1.00, it has been falling for the past three years and stood at 1.35:1.00 the end of 1985. This is the lowest it has been since 1972.

The Government of Canada's financing requirement amounted to \$32.5 billion, 7.3% of GNE. The comparable figure for 1984 was 6.7%. Interest on the public debt rose 17%, the fastest growing expenditure in 1985. Direct taxes on persons was up 12%

over 1984. Marketable bonds including foreign currency issues accounted for the bulk of these financing needs in 1985, amounting to \$15.5 billion. These instruments grew 22% over the year. Treasury bills, which sourced \$9.9 billion in net new funds, grew 20%, while Canada Savings Bonds' net sales produced \$6.1 billion, bringing the total outstanding at the end of the year to slightly under \$50 billion. Excluding this latter instrument, the average term to maturity of the federal government's marketable debt (i.e., bonds and bills) was five years and six months, down one month over the year.

For all instruments, yields ended the year lower than they begun. With inflation remaining at relatively low levels, interest rates, after peaking in February or March, fell in an almost uninterrupted slide, except for short-term rates in late fall. The largest declines occurred at the longer end of the market while the prime rate fell one and a quarter points. Bank lending oscillated from quarter to quarter — partly in response to yields on competing instruments, partly in relation to inventory and other financing needs — but over the year they rose \$6.2 billion, the strongest gain in four years. Despite that, however, the large repayments that occurred in 1982 and 1983 still left the level outstanding at the end of 1985 below the peak of 1981.

The Financial Market Summary Table compresses the abundance of detail presented in the Financial Flows sector tables by aggregating sectors and by deleting non-market instruments such as trade credit and claims on associated enterprises. The table also provides a useful approximation of final borrowing via financial markets (i.e., the organized markets for security issues and negotiated loans) and avoids double counting of the intermediary borrowing and re-lending of financial institutions. Line 5 (Total Borrowing by Domestic Non-Financial Sectors) provides the unduplicated total which serves as a simple summary statistic of domestic credit market activity. The addition of the Rest of the World and Financial institutions (lines 6 and 8) completes the system and consequently line 9 (Total Funds Raised=Total Funds Supplied) reflects the basic identity that the change in liabilities, summed across sectors, for an instrument or instruments equals the change in assets, summed across sectors, for the same instrument or instruments. Further discussion of the table is contained in an article published in Financial Flow Accounts, Second Quarter 1976 and in the Canadian Statistical Review, March 1977.

- 1) Since Sector XII, Social Security Funds, has been consolidated with General Government, the holdings by the Funds of Provincial and Federal Government bond debt are netted out. the asset bond figure (category 2420) for Sector XII is subtracted from the sum of the liability bond figure for Sectors X (Federal Government) plus XI (Provincial and Local Governments and Hospitals).
- 2) Separate figures for the share liabilities of the Rest of the World (Sector XIII) are not available but since Foreign Investments (category 3530) consists mostly of shares, it is classified to Stocks.
- 3) The Stock figure included in Sector I and II is the true residual of category 3520, i.e., it is the sum of category 3520 (the stock liability) less the sum of category 2520 (the stock asset) for sectors III through XIII. This procedure is necessary to ensure the balance between total funds supplied and raised in line 9. In the main Financial Flows Matrix the sum across sectors of corporate claims plus stocks on the liability side equals the sum of the two on the asset side; however, stocks alone do not balance because stocks on the liability side include shares issued to associated enterprises (included in corporate claims on the asset side).

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 • System of National Accounts

1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and
Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

- 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes ¹	Deduct dividends paid to non-residents ²	Interest & misc. investment income ³	Accr'd net income of farm operators from farm prod. ⁴	Net income of non-farm un-incorp. business incl. rent ⁵	Inventory valuation adjust. ⁶	Net national income at factor cost	Indirect taxes less subsidies	Capital consump. allowances & misc. val. adj. ¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

4	295.3	302.7	290.6	294.0	322.3	318.8	336.2	326.7	310.3

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity.

* For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars)

		Non-durable goods industries

¹Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars)

End of period and month	Non-durable goods industries												
	Total inventories owned	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

End of period and month	Inventories owned				Inventories held: Total			Inventories held: raw materials						
	Consumer goods Non-durable and semi-durable	Capital goods	Construction materials and components	Supplementary classification: automotive products	Consumer goods	Intermediate goods and supplies	Export-oriented industries	Consumer goods		Capital goods	Construction materials and components	Intermediate goods and supplies	Export-oriented industries	Supplementary classification: automotive products

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

¹Gas types are included. ²Includes producers' shipments for export. ³In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. ⁴End of period. ⁵Electric and other. ⁶Excludes apartment type machines. ⁷Excludes other than electric.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.
